Problem Statement

Healthcare systems often face delays in detecting diseases due to limited diagnostic resources.

Problems:

- Lack of Early Diagnosis
- People Ignore Symptoms
- Limited Access to Doctors
- Late Detection of Serious Diseases like Cancer

Our Solution:

AI Smart Healthcare Assistant

Early Disease Detection System

Analyzes Symptoms

Image & Report Upload

Detects Possible Diseases

Identifies Cancer Risk

Suggests Suitable Doctors

Your Health, Our Priority!

Key Features

- Symptom-based Disease Detection
- Image Upload Analysis
- Report Analysis
- Cancer Risk Identification
- Doctor Recommendation System

Tech Stack

- Frontend: **Streamlit (UI)**
- Backend: **Python**
- Logic:
  - Rule-based intilligent system
  - Keyword matching algorithm
- Deployment: **Streamlit Cloud**
- Tools: **VS Code**
  GitHub

WORKING

User Input

Processing

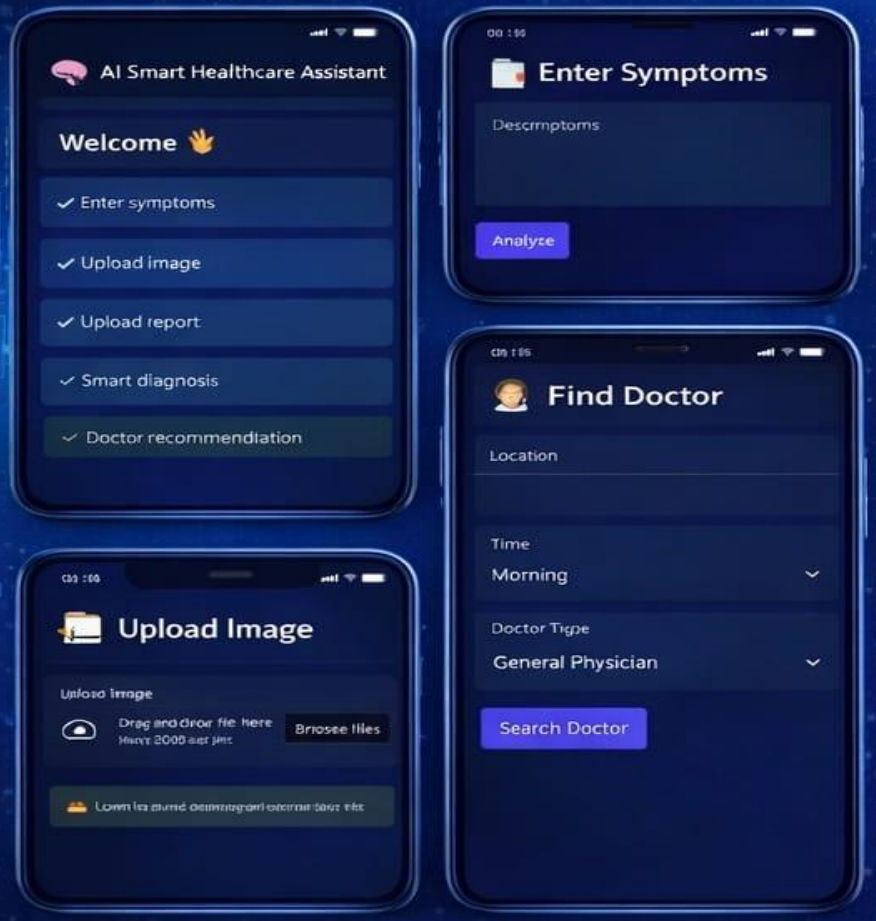
Pattern Matching

Prediction

Doctor Suggestion

👉 Clear pipeline = reliable output

APP DEMO



Key Features

- ✔ Symptom-based prediction
- ✔ Image & report analysis
- ✔ Smart diagnosis
- ✔ Doctor recommendation

User Flow

User → Input → AI → Prediction → Doctor

👉 **Complete** healthcare in one platform

ADVANTAGES & FUTURE SCOPE

Advantages

- Fast results
- Easy to use (no medical knowledge needed)
- Low cost solution
- Accessible anytime, anywhere

Future Scope

- Real AI models
- Hospital integration
- Mobile app
- Live booking

CONCLUSION

- Early detection saves lives
- System gives quick medical guidance
- Helps users act before it becomes serious
- 👉Smart tool, real impact

Thank You!
